How to Auto-Enroll Learners to Online Classroom Using API

With ProProfs, there are numerous ways in which you can register learners in your online classroom. One of them is by auto-enrolling learners in the classroom using ProProfs API.

How does it work?

With the help of API, you can auto-register users to your classroom on the fly without logging in to ProProfs. You need to call our API with learners' details, such as their email/ID, name, password, group details, etc., and learners will be automatically registered to your classroom.

Read ProProfs REST API Guide (Register New User In Classroom), which contains the technical documentation and example files.

To start the process, you will require the API key, which you can find in your "My Account" page, as shown in the image below.
