

How to Improve Quiz Translation in Different Languages

We support hundreds of languages. You can easily create a non-English quiz where you can translate the user-interface language (buttons and associated text such as "Start Quiz") to the language you define in "Language Setting" section of the quiz.

We've used a top of the line translation service. However, **we will be glad to make improvements based on your suggestions**. Please note that we cannot make language changes specific to your quiz but only to the user interface text, which means that we cannot translate your quiz into a different language. So, only send suggestions for text that apply to all [quizzes](#) so we can improve the [quiz maker](#) for all of our users from your country.

Note- You can directly type quizzes in any language.
