

How to Set Password and Accessibility to a Quiz

You can create password protected quizzes, where learners will be required to enter the password before they take the quiz. We also offer a number of other options by which you can [make your quizzes private and secure](#).

Step 1: On your quiz setting page, under "Security and Tracking", create a password for the quiz and click on "Save".

The screenshot shows the ProProfs Quiz Maker interface. At the top, there are navigation buttons: Create, Settings, Send, Reports, Preview, and Save. Below this is the 'Math Quiz' title and a menu of settings tabs: General, Security (selected), Notifications, Price, Theme, Social Media, Advanced, and Integrations. The 'Quiz Security' section has two main options: 'Public' and 'Private'. The 'Private' option is selected. Under 'Private', there are three radio button options: 'Private access with a link', 'Private access with a link & quiz password' (which is selected and has an orange arrow pointing to it), and 'Private access for selected users & groups'. A password field next to the selected option contains '*****'. The 'Browser Security' section has two toggle switches: 'Disable print' and 'Disable copy', both of which are set to 'No'.

Step 2. Your quiz is now protected and you can preview your quiz to view the prompt for the password.
