

How to Protect Your Quiz Data and User Information

There are several options available to protect your quiz data and user information.

- One option is to make your quiz private, which is a premium-only feature. Making your quiz private prevents it from appearing on ProProfs or search engines like Google. Only those with whom you share the quiz URL will be able to access it.
- Another option is to password-protect your quiz for added security.
- The quiz takers' data is only visible to you in the admin panel. Quiz takers do not need to register on the website to take the quiz. They can simply start by answering some questions that you select, such as providing their name and email address.
