

# How to Protect Your Quiz Data and User Information

You have a lot of options to protect your quiz data and user information:

1. You can [make a quiz](#) private. This is a premium-only feature. It prevents your quiz from getting listed on ProProfs and on search engines. If you marked your quiz "**private**" it would not show in google. Private quizzes are only visible to those whom you share the URL of the quiz with.
2. For additional protection, you can password protect the quiz.
3. The quiz taker's data is only visible to you in the admin panel. We never email your quiz takers and they need not register on our website. They can simply start the quiz by answering some questions (that you select such as providing their name, email, etc).
